**Safety**

Safety is essential in the use and maintenance of Greenlee tools and equipment. This service manual and any markings on the tools provide information for avoiding hazards and unsafe practices related to use of this tool. Observe all of the safety information provided.

Do not operate this tool unless fully trained to do so, or under trained supervision.

**Purpose of this Manual**

This manual is intended to familiarize authorized Greenlee service center personnel with the safe operation and maintenance procedures for the Greenlee 6800-22 Ultra Tugger® cable puller.

Keep this manual available to all personnel.

Replacement manuals are available upon request at no charge at [www.greenlee.com](http://www.greenlee.com).

## IMPORTANT SAFETY INFORMATION

### SAFETY ALERT SYMBOL

This symbol is used to call your attention to hazards or unsafe practices which could result in an injury or property damage. The signal word, defined below, indicates the severity of the hazard. The message after the signal word provides information for preventing or avoiding the hazard.

#### **⚠ DANGER**

Immediate hazards which, if not avoided, **WILL** result in severe injury or death.

#### **⚠ WARNING**

Hazards which, if not avoided, **COULD** result in severe injury or death.

#### **⚠ CAUTION**

Hazards or unsafe practices which, if not avoided, **MAY** result in injury or property damage.

#### **⚠ WARNING**

Electric shock hazard:  
Disconnect the cable puller from the power supply before servicing.  
Failure to observe this warning could result in severe injury or death.

#### **⚠ WARNING**

Flying components hazard:

- Inspect and verify the maximum load-bearing capacity or maximum strength of all structural supports, pulling system components and anchoring systems before setting up the puller. Any component that cannot withstand the maximum cable-pulling forces could break and strike nearby personnel with sufficient force to cause severe injury or death.
- Do not allow anything other than the pulling rope to contact the capstan. A grip, swivel, or other component could break and strike operator with great force.

Failure to observe these warnings could result in severe injury or death.

#### **⚠ DANGER**

Read and understand all of the instructions and safety information in this manual before operating or servicing this tool.

Failure to observe this warning will result in severe injury or death.

#### **⚠ DANGER**

Explosion hazard:  
Do not operate the cable puller in a hazardous environment. Hazards include flammable liquids and gases.  
Failure to observe this warning will result in severe injury or death.

#### **⚠ WARNING**

Crushing hazard:  
Do not stand directly under a vertical pull. Cable could fall suddenly from the conduit.  
Failure to observe this warning could result in severe injury or death.

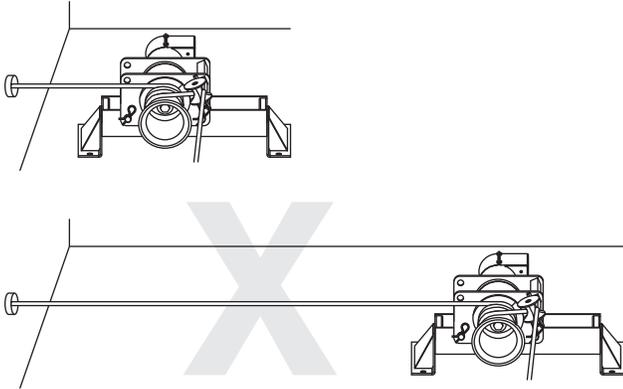

## IMPORTANT SAFETY INFORMATION

### ⚠ WARNING

Flying components hazard:

Locate the puller so that it is close to the conduit. Rope, cable, or connectors could break under tension, causing the rope to whip violently.

Failure to observe this warning could result in severe injury or death.

### ⚠ WARNING

Attach the pulling rope to the cable with appropriate types of connectors as described in this manual. Select connectors with a maximum-rated capacity of 35.6 kN (8000 lb). An under-rated connector could break under tension.

Failure to observe this warning could result in severe injury or death.

### ⚠ WARNING

Shear Point:

Do not put fingers through holes in elbow unit. Rotating parts could cut off fingers.

Failure to observe this warning could result in severe injury or death.

### ⚠ WARNING

- Do not maintain a stationary rope on a rotating capstan. The wear generated could cause the rope to break under tension and whip violently.
- Check the condition of the entire rope before use. An under-rated, worn or damaged rope could break and whip violently.
- Use a double-braided composite rope with the following characteristics:
  - Maximum Rated Capacity: at least 35.6 kN (8000 lb)
  - Average Breaking Strength: at least 143 kN (32,000 lb)

Failure to observe these warnings could result in severe injury or death.

### ⚠ WARNING

Crushing hazard:

Keep hands away from the capstan. Rope at the capstan could crush a hand.

Failure to observe this warning could result in severe injury or death.

### ⚠ WARNING

Entanglement hazard:

Do not wrap rope around hands, arms, waist or other body parts. Do not stand in spent coils or tailed rope. Hold rope so that it may be released quickly.

Failure to observe this warning could result in severe injury or death.

## **IMPORTANT SAFETY INFORMATION**

### **⚠ WARNING**

Rope, cable, or a connecting device could break under tension, causing the rope to whip violently.

- Do not allow any unnecessary personnel to remain in the area during the pull.
- Do not allow any personnel to stand in line with the pulling rope.

Failure to observe these warnings could result in severe injury or death.

### **⚠ WARNING**

Rope overlap hazard:

Do not allow the rope to become overlapped on the capstan. If an overlap begins to develop, relax the tailing force immediately and shut off the cable puller.

Failure to observe this warning could result in severe injury or death.

### **⚠ WARNING**

Lifting hazard:

Use this tool for manufacturer's intended purpose only. Do not use the cable puller as a hoist or winch.

- The cable puller cannot lower a load.
- The load could fall.

Failure to observe this warning could result in severe injury or death.

### **⚠ WARNING**

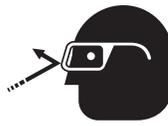

Inspect puller and accessories before use. Replace any worn or damaged components with Greenlee replacement parts. A damaged or improperly assembled item could break and strike nearby personnel with sufficient force to cause severe injury or death.

### **⚠ WARNING**

Entanglement hazard:

- Do not operate the cable puller while wearing loose-fitting clothing.
- Retain long hair.

Failure to observe this warning could result in severe injury or death.

### **⚠ WARNING**

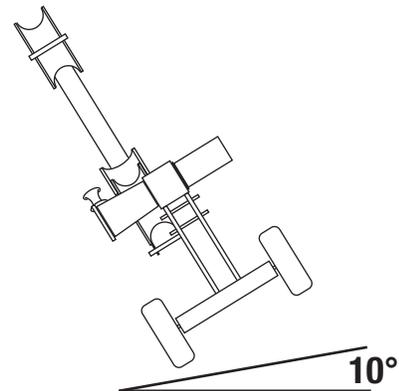

Wear eye protection when using this tool. Failure to wear eye protection could result in severe eye injury from flying debris.

### **⚠ WARNING**

Tipping hazard:

When using the wheeled carriage to transport the Ultra Tugger:

- Keep personnel out of the path of transport.
- Evaluate the terrain over which the carriage is to move. If in doubt, obtain additional help and move the carriage slowly.
- Do not transport over inclines of more than 10°.
- Do not transport the carriage with boom tubes longer than the supplied 3' and 4' tubes.

Failure to observe this warning could result in severe injury or death.

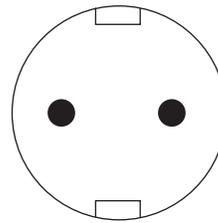

## Grounding Instructions

	<b>⚠ WARNING</b>
	Electric shock hazard: Connect this tool to a grounded receptacle on a 16-amp GFCI-protected circuit. Failure to observe this warning could result in severe injury or death.

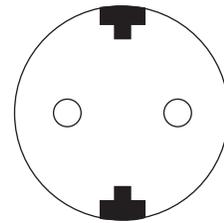

This tool must be grounded. In the event of a malfunction or breakdown, an electrical ground provides a path of least resistance for the electric current. This path of least resistance is intended to reduce the risk of electric shock to the operator.

This tool's electric cord has a grounding conductor and a grounding plug as shown. Connect the plug to receptacle that is properly installed and grounded in accordance with all national and local codes and ordinances. Do not use an adapter.

### 16-Amp / 230-Volt Plug and Grounded Receptacle

Plug

Receptacle

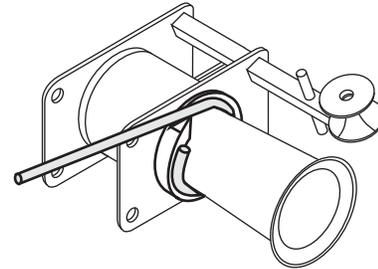

This tool is equipped with a European-style electrical plug. The electrical plug can be replaced with a compatible plug for the country in which the tool will be used. The electrical plug should be replaced by a qualified electrician. Do not use an adapter.

### Operation

1. Fish the rope through the conduit.
2. Set up the cable puller. See “Typical Setups” illustrations and instructions in Instruction Manual 99938502 (IM 1529).

- c. Push the ramp toward the mounting plate and rotate it counterclockwise until it locks into place.

**⚠ WARNING**

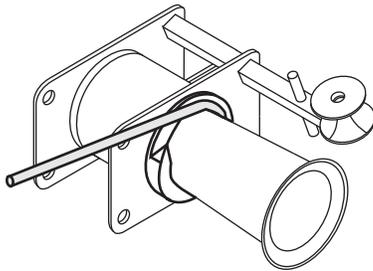

Set up the cable puller so that the rope will approach the capstan at an angle of 90° (±5°). Angles outside of this range may cause the rope to overlap.

4. Check the I/O switch on the puller to be sure it is OFF (O). Plug the puller into the receptacle of the standard force gauge.
5. Connect the force gauge to an appropriate power supply (see “Grounding Instructions” in this manual).  
*Note: If using an extension cord, it must be rated for 20 amps. Use the shortest cord possible. Longer cords reduce puller speed.*
6. Position the force gauge so that it can be monitored by the puller operator.

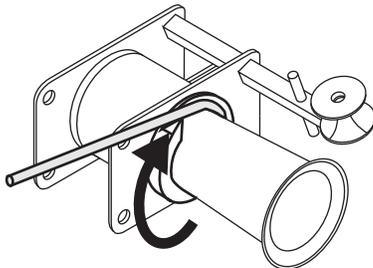

#### Duty Cycle Table

Color Band on Meter	Pounds of Pulling Force	Duty Cycle (in minutes)
Green	0–17.8 kN (0–4000 lb)	continuous
Yellow	17.8–35.6 kN (4000–8000 lb)	5 per hour
Red	over 35.6 kN (8000 lb)	puller will stop

3. Set the rope ramp as follows:
  - a. Wind the rope several times around the capstan.

- b. Pull the ramp away from the mounting plate and rotate it until the flat surface contacts the rope.

7. Turn the circuit breaker in the force gauge ON (I).
8. Grasp the tailing end of the rope. Apply a slight amount of tailing force.
9. Turn the puller ON (I).
10. Tail the rope, allowing the spent rope to accumulate on the floor between the operator and the puller.
11. When the pull is complete, turn the puller OFF (O). Tie off the rope and anchor the cable.

**⚠ WARNING**

Entanglement hazard:  
Do not wrap rope around hands, arms, waist or other body parts. Do not stand in spent coils or tailed rope. Hold rope so that it may be released quickly.  
Failure to observe this warning could result in severe injury or death.

## Maintenance

### **⚠ WARNING**

Disconnect power supply before servicing this tool, or when not in use.

Failure to observe this warning could result in severe injury or death.

### **IMPORTANT**

**Maintenance should be performed by authorized personnel only.**

- Secure motor wires to the motor using tie-wraps. Make sure the wires will not contact the commutator.
- Connect the brown motor wire to the positive (+) terminal on the rectifier (10). Connect the blue motor wire to the negative (-) terminal on the rectifier.

### **IMPORTANT**

The first reduction hub will be damaged if the motor wires are reversed.

- Connect the green and yellow wires from the power cord, motor, and filter to the heat sink plate.

### **General Maintenance Notes**

- Replace any part that is broken, cracked or worn.
- Replace any bearings that don't turn freely.
- Clean all mating surfaces before assembly.
- Replace gearbox grease with Texaco® Regal AFB or equivalent.

### **Specific Service Notes**

- Average brush life for commutator brushes is about 100 hours. Replace brushes if they are shorter than 9.5 mm (3/8").
- Replace rope ramp if it is grooved more than 6.5 mm (1/4").
- Replace the capstan if it is grooved more than 0.15 mm (1/16").
- The puller should not require any lubrication during its normal service life.

### **Switchbox Removal**

1. Remove the four Phillips head screws and cover from the switchbox (1).
2. Remove the green hex head screw (28), three lock washers (29) and three yellow and green wires from the heat sink plate (24).
3. Remove the brown and blue motor wires from the filter (10).
4. Remove fifteen hex head screws (23), and top cover (21) from the motor. Be careful not to damage the brown, blue, and green motor wire when you remove the top cover from the motor.
5. Remove the four hex nuts (5), four screws (4), and switchbox (1) from the top cover.

### **Switchbox Assembly Notes**

1. If replacing the rectifier (10), or filter (11), use a thermal contact grease before mounting to heat sink (24).

### **Motor Removal**

See "Exploded View—Ultra Tugger"

1. Remove switchbox.
2. Remove seven hex head screws (23) and cover (20) from the motor.
3. Use the 7/16" wrench to remove two hex nuts (34) and end cap (19).

See "Exploded View—Motor"

4. Push in and pull out the tab to release the commutator brush springs (2).
5. Use 7/16" wrench and remove four hex nuts, two lock washers, and tail housing (3) from the motor.
6. Remove brush assembly plate (4).
7. Remove the O-ring (35), baffle (22), and end support (18) from the motor housing. (See "Exploded View—Ultra Tugger.")
8. Remove magnet housing (5).
9. Remove armature (6).
10. Remove screw holding the air vent protective screen and remove screen (9).

### **Motor Assembly Notes**

1. Apply gasket sealant between gearbox housing and the outside of the front armature housing.
2. If the armature does not turn freely after installation, the wrong gear teeth were engaged.
3. Hold armature in place when installing the magnet housing. Position magnet housing with the roll pin outward and pointed towards 8 o'clock. The square hole of the mounting plate should be positioned at 10 o'clock.
4. Install commutator brush assembly. Wires should be at the 9 o'clock position.
5. Insert magnet housing roll pin into the recess on the tail housing.

## Maintenance (cont'd)

### Capstan Removal

1. Use a 1-1/8" inch 18-point socket to remove capstan retaining bolt (44) and washers (45).
2. Pull the capstan (37) off of the shaft.  
If the capstan is stuck: Pull out the rope ramp.  
Use two pry bars on opposite sides of the capstan between the gear housing and the capstan.

### IMPORTANT

Do not pry against the grease seal. Doing so will damage the seal.

3. Remove key (49).
4. Remove rope ramp (38).

### Capstan Assembly Notes

1. Remove oxidation before assembling.
2. **Do not hammer capstan onto shaft.** Use a 65 mm (2-1/2") or longer bolt to draw the capstan onto the shaft.

### Right Angle Sheave Bracket Removal

1. Remove detent pin (48).
2. Slide arm towards motor. Use a small punch to remove the roll pin (42).
3. Remove bracket (39).

### Gearbox Disassembly

1. Remove motor, capstan and right angle sheave bracket.
2. Remove the screws (38) on the motor side of the gearbox. Remove the mounting plate (20).
3. Remove the motor mounting housing (2).
4. Pull out the 1st reduction planet gear assembly and thrust washer.
5. Pull out the center shaft (12).
6. Pull out the 2nd reduction planet gear assembly and thrust washer.
7. Push out the output shaft/3rd reduction gear assembly and thrust washer.
8. Remove the screws (37) holding the ring gear (18).
9. Tap the bearing housing (1) off the ring gear and dowel pins. **Do not mar the mating surface to the ring gear.**

### Gearbox Assembly Note

1. Clean all ring mating surfaces. Apply a flange sealant (Loctite® 515 or equivalent) to all ring mating surfaces.
2. Install center shaft with the small diameter towards the motor.
3. Install the mounting plates. When viewed from the motor end, the motor mounting studs should be positioned at 1 and 7 o'clock. The square hole in the mounting plate should be between 10 and 11 o'clock.
4. Position mounting plates so the screw heads on the capstan side fit into the counterbores of the mounting plates.

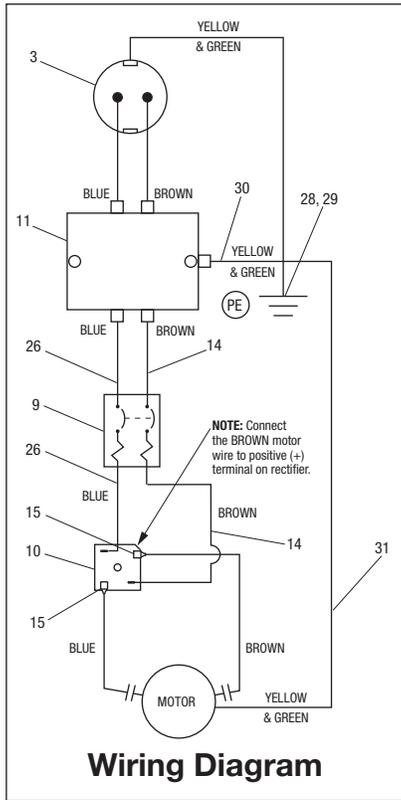

### Disassembly of Planet Gear Carriers

1. Remove the flat head screws.
2. Tap or pry off the hub plate from the hub and dowel pins.
3. Remove the thrust washers, gears, thrust washers and shaft.
4. Remove sun gear ONLY if replacement is required.

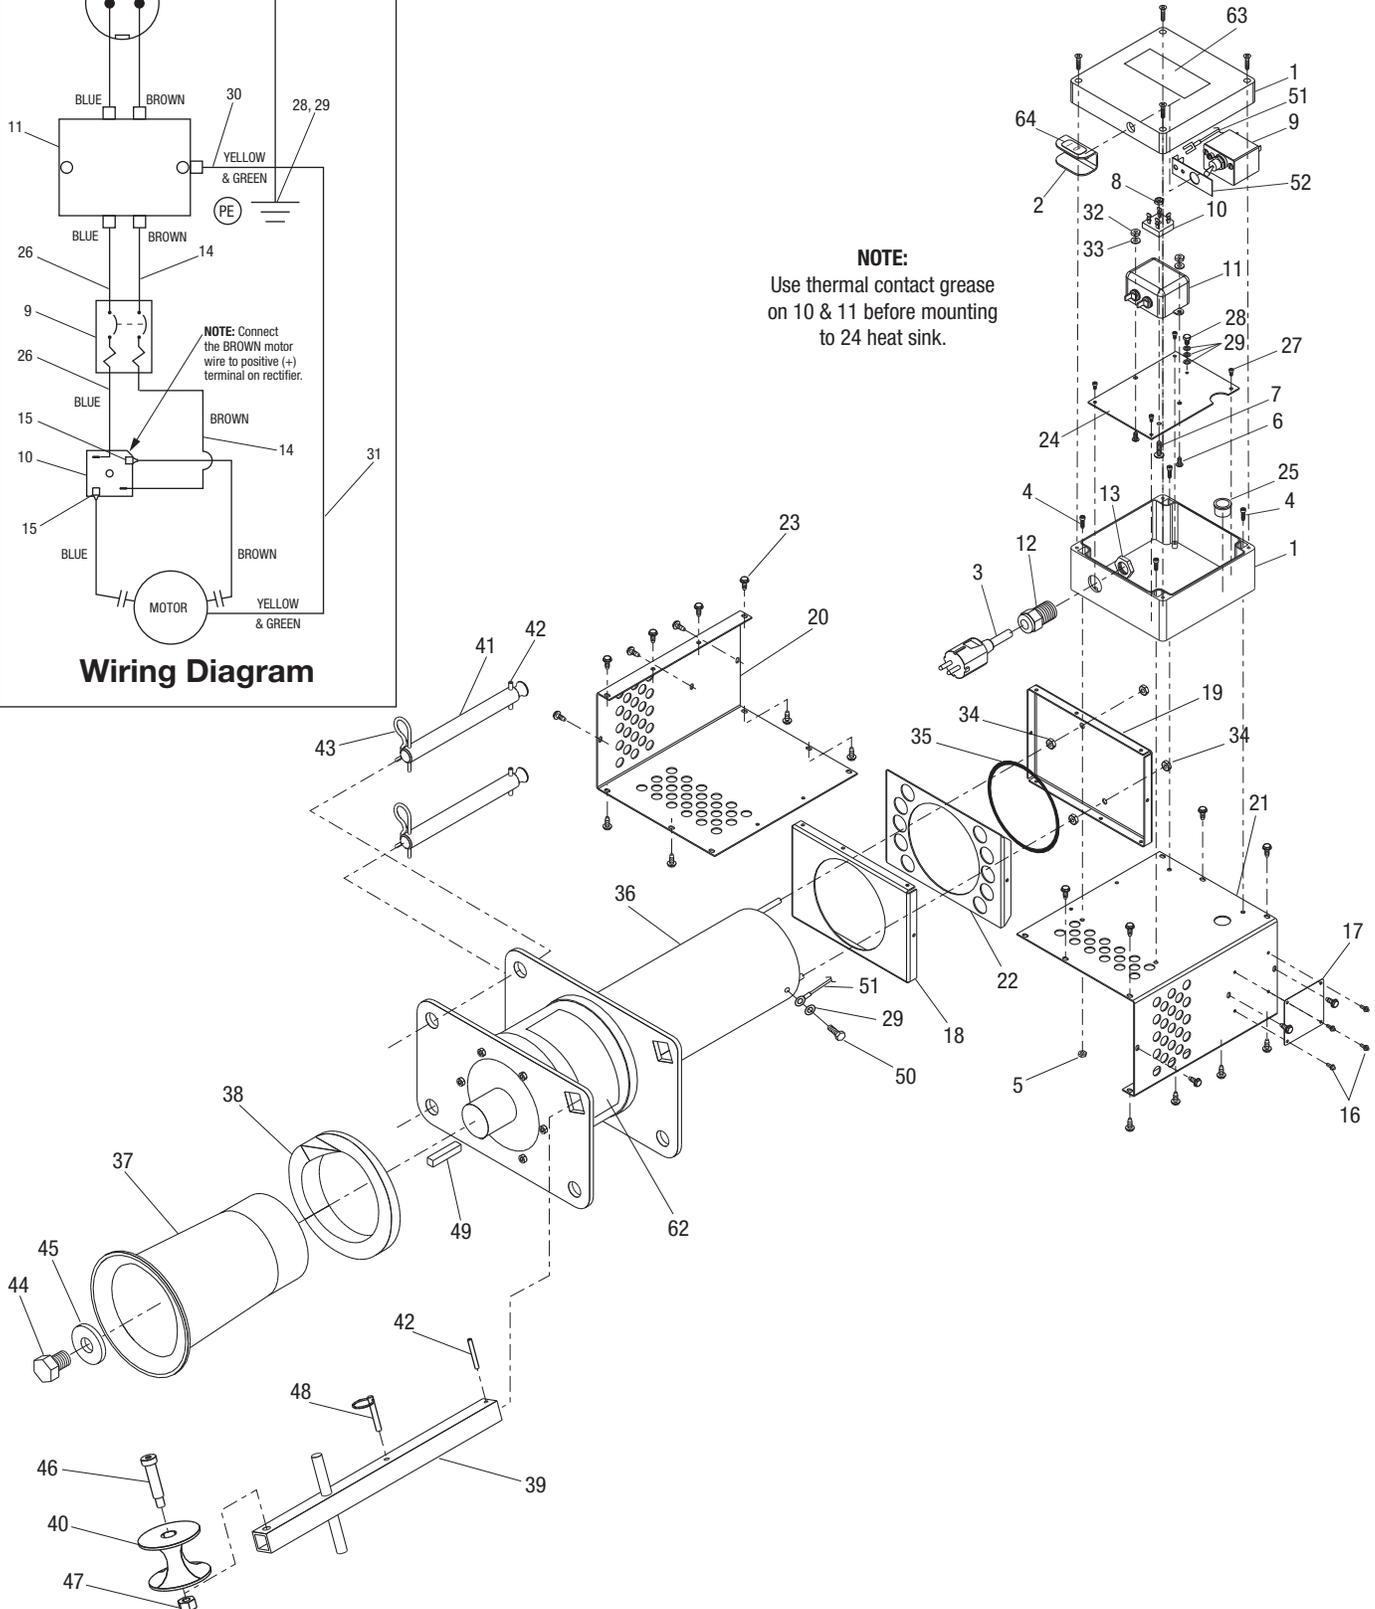

### Planet Gear Carrier Assembly

1. Place the shafts in the hub. The end with the flat should face outward.
2. The 1st planet reduction gears must be positioned with the gear end towards the capstan.
3. When replacing the 1st reduction gear bearing/clutch, the locked arrow direction must be counter-clockwise (when viewed from the gear end).
4. **When replacing the ball bearing on the output shaft, the thick side of the outer race must face the capstan.**
5. Use a removable thread locking compound, such as Loctite® 242® Threadlocker or equivalent, on the #10-32 flat head screws (items 35 and 36 on the gearmotor). Follow the manufacturer's instructions for curing.

### Exploded View and Wiring Diagram — 50079247 Ultra Tugger (Serial Code ADB)

**NOTE:**  
Use thermal contact grease on 10 & 11 before mounting to 24 heat sink.
