

1600 SYSTEM
MULTI-PURPOSE ENAMEL AEROSOL

DESCRIPTION AND USES

Industrial Choice® 1600 System Sprays are fast-dry, multi-purpose, modified alkyd enamel aerosols for everyday indoor/outdoor industrial applications. These aerosols will spray in any position. Not for use on galvanized steel.

Galvanizing aerosols are used for touch-up and repair to damaged galvanized steel. Do not topcoat with an alkyd finish.

Industrial Choice 1600 System Sprays comply with USDA FSIS regulatory sanitation performance standards for food establishment facilities.

PRODUCT APPLICATION

SURFACE PREPARATION

ALL SURFACES: Remove all dirt, grease, oil, salt and chemical contaminants by washing the surface with Krud Kutter® Cleaner Degreaser, commercial detergent or other suitable cleaner. Rinse immediately and thoroughly and allow to fully dry. Thoroughly cured, hard or gloss previous coatings which are very smooth may require scuff sanding to maximize adhesion. This coating may not be compatible with some types of plastics. It is strongly suggested a small test patch be done before applying to any plastic. Also, some plastics, like polycarbonate, are never to be painted. Consult with the manufacture.

STEEL: Hand tool (SSPC-SP-2) or power tool (SSPC-SP-3) clean to remove loose rust, mill scale, and deteriorated previous coatings. For best results, use Red Primer on sound rusted or clean metal before the application of a finish coat or intermediate primer.

GALVANIZED STEEL: New galvanized steel may contain a surface wax or oil from the fabricator. This must be removed with Krud Kutter® Cleaner Degreaser, commercial detergent or other suitable cleaner. **NOTE:** Only the Galvanizing Compounds are to be used on galvanized steel. Do not use any other of the 1600 System Primers or Finish Colors.

WEATHERED GALVANIZED STEEL: Remove loose rust and stains by hand tool (SSPC-SP-2) or power tool (SSPC-SP-3) prior to application of the Cold Galvanizing Compound.

APPLICATION

Use when temperature is above 50°F (10°C) and humidity is below 85% to ensure proper drying. Surface temperature must be between 50-100°F (10-38°C). Use a primer on bare or rusted surfaces. Protect surrounding surfaces from overspray. Overspray can carry a significant distance. Shake can for one minute after mixing ball is heard. Hold can 10-14" from surface. Apply several light coats a few minutes apart to avoid drips and runs. This aerosol will spray in any position or angle, including upside down.
